GitHub: github.com/dasorpita100

Email: dasorpita100@gmail.com

Mobile: +91-8777390784

Skills

Languages: C++, Python, MySQL, DSA, HTML, CSS, JS
Tools/Platforms: Power BI, Git, GitHub, Microsoft Excel, Jupyter Notebook, VS Code, IDLE,
Soft Skills: Public Speaking, Communication, Leadership, Problem
Frameworks/Libraries: Flask, NumPy, Pandas, Scikit-learn, Hadoop, Hive, HBase

Experience

AI-Based Web Application Intern| Infosys Springboard (Virtual) | Link

Mar 2026 – Apr 2026

- Created a working prototype of an AI code-generation web application in a one-month virtual internship, completing four structured milestones: system design, model integration, dashboard analytics and GitHub-based deployment.
- Integrated generative AI model APIs into a Flask backend with user authentication, session handling and SQLite database management, designing the request flow from a user's prompt to generated code, explanation and keywords.
- Diagnosed and resolved API authentication errors, database schema issues and deployment failures, and added fallback handling, so the application kept responding when a model's API failed.

Projects

Nagpur Heat Vulnerability Index – SMART CITY 2030 (BRICS) 1st Place | Article

Sep 2026

- Led a two-student team to 1st place in the "Safe and Comfortable Urban Environment" category of the SMART CITY 2030 international competition (391 participating teams), organised by Peter the Great St. Petersburg Polytechnic University, Russia, with Lovely Professional University, Tsinghua University, and the Federal University of Rio de Janeiro.
- Built a ward-level Heat Vulnerability Index for all 38 wards of Nagpur, India, combining six indicators from 11 years of Landsat data, land cover, population and municipal ward data, with weights derived using PCA.
- Showed that daytime surface temperature runs against vulnerability ($\rho = -0.18$), identified wards holding 40% of residents (986,625) as priority areas, and proposed a four-stage implementation plan with seasonal monitoring.

Tech stack used: Python, GeoPandas, Rasterio, scikit-learn, Landsat, ESA WorldCover, WorldPop

CodeGenie - AI Code Generation and Learning Platform | GitHub

Apr 2026

- Worked on a full-stack web application that converts natural-language prompts into complete code, explanations and keywords across multiple languages (Python, Java, C++), with syntax-highlighted output stored in each user's history.
- Designed a resilient three-provider fallback (Gemini → Groq → Hugging Face) that moves a request to the next model when one API fails, on a Flask backend with user authentication and SQLite storage of each user's history.
- Generated user and admin dashboards (history, usage statistics, Chart.js analytics) and a feedback system to track how the platform is used and rated, achieving 95% consistent output generation.

Tech stack used: Python, Flask, SQLite, Gemini API, Groq API, Hugging Face API, JavaScript, HTML/CSS, Chart.js

Fraud Lens – Cybersecurity & Financial Document Tampering Detection System | GitHub

Mar 2026

- Co-developed a full-stack cybersecurity web application that protects users from financial fraud by detecting scam SMS communications and uncovering structural/textual tampering in uploaded financial records.
- Engineered backend analysis routes in Flask, incorporating safe file handling, session controls, and automated verification pipelines to analyze textual urgency cues and file metadata discrepancies.
- Delivered security hardening and testing initiatives across the team—executing penetration tests, validating AI model outputs, and implementing an intuitive audit dashboard with confidence scores and fraud alerts.

Tech stack used: Python, Flask, SQLite, Scikit-learn, NLP, PDF Processing, JavaScript, HTML/CSS, OWASP Standards, Penetration Testing, Git

Training

DSA Intern – C++ Developer | Cipher School (Hybrid) | Certificate

Jun 2025- Jul 2025

- Solved 100+ algorithmic problems using C++ and STL across arrays, recursion, dynamic programming, and graph-based challenges.
- Enhanced code performance and analytical thinking through weekly code reviews, mock interviews, and structured mentor feedback.
- Gained practical mastery in C++, STL, OOP, Git, and GitHub by implementing efficient algorithms, optimizing solutions, and working with real-world version-control workflows.

Certificates

Master Generative AI & Generative AI tools (ChatGPT & more) - Infosys

Aug 2025

ChatGPT-4 Prompt Engineering: ChatGPT, Generative AI & LLM - Infosys

Aug 2025

Privacy and Security in Online Social media - NPTEL

Apr 2025

Achievements

1st Place, SMART CITY 2030 International Competition (BRICS) - Link

Sep 2026

3rd Position, Debate – Spectra, LPU's Flagship Inter-School Fest

Feb 2026

Runner-Up, Debate Competition – Edu Revolution, LPU

Apr 2025

Education

Lovely Professional University

Bachelor of Technology - Computer Science and Engineering; CGPA: 8.51

Phagwara, Punjab

The Heritage School

Senior Secondary (ISC); Percentage: 83.25

Aug 2023 - Jul 2027

St. Michael's School

Secondary Board (ICSE); Percentage: 96.80

Kolkata, West Bengal

Jun 2022 - Mar 2023

Siliguri, West Bengal

Jun 2020 -Mar 2021
